

The Future of Biological Drain Treatment

bioTEQ-DT Dispenser

bioTEQ block drain treatment products are shipped in solid, concentrated form and the chemicals are dissolved on-site at the point of application.

The battery powered dissolving unit is mounted to a wall or structure and connected to water supply.

The solution outlet of the dissolving unit is connected to a suitable drain upstream of the main drain outlet.

The dissolved product is timed to dispense when the establishment is not in operation.

Water is sprayed through a specially configured and calibrated spray nozzle up into the bioTEQ block where the water dissolves a portion of the product and dispenses via gravity into the main drain system.

Dissolver Installation

- Quick and easy to install
- Requires water supply
- Dispensed via gravity into a nearby drain point
- Easy front access to load the Solid block
- Very low maintenance
- Simple programmable timer
- Option for remote access and data retrieval
